 - Provide technical assistance with computing devices and networks.
 - Filing tickets with Remedy.

university activities

- Computer Science Club** Technical executive since 2013
- Part of core team re-establishing the club at York.
 - Developed mini social network site for the club. Over 110 registered and active users. www.cshub.ca.
 - System administrator: Setup, and manage local servers hosting clubs website.
 - We organize hackathons, 'tech talks' and tutorials for members.
- York University Rover Team** Senior/travelling developer 2011-2013
- Competing in the NASA Lunabotics Mining Competition (Florida), University Rover Challenge (Utah), and Innovation Nation 2013 (Hamilton, Ontario).
 - Developed tilt sensor widget for driver GUI
 - Built and set-up 900mhz router for long distance communication with Rover.
 - Developed "plug'n automatically stream" video daemon for On Board Computer, for hassle free video streaming.
 - Compiling/testing various applications. (GStreamer, Robot OS, Linux images)
 - Designed and developed team webpage with a group of 2 other friends. Visit it at roverteam.cs.yorku.ca.
 - System administrator: Setup and manage local servers hosting team's wiki.

projects

www.openyorku.com unofficial RESTful API for YorkU

from 2014

- Scrapes various parts of York Universities web site, populating a database, and making it easily available via a RESTful API.
Built with JavaScript + Node.js, Python, and MongoDB. Hosted on Heroku.

www.cshub.ca York's CS club social networking site

from 2013

- Designed, built, and deployed site, used by over 110 students.
- Users are free to signup, create accounts, edit profiles, comment on events, confirm whether or not they're going, and earn badges!
- Admins may create new events, notifications, manage home page images, and edit user accounts.
Built with Python + Django, JavaScript + sigma.js, Bash, MySQL, Redis

www.perfectresu.me Social resume analysis/inspiration

from 2014

- Users upload their resumes, to have others rate, and comment on it. Filter resumes by tags, to find one that suits exactly what you're looking for.
Built with JavaScript + Node.js, MongoDB. Hosted on AWS EC2.

more projects

- **QRi-Fi**: Connect to WiFi hotspots by scanning a QR Code. *built with Python*
- **at.me**: Turning humans into ATM's. *built with JavaScript + Node.js*
- **Wander Tower Defence**:. A tower defense game, that's highly customizable - allowing users to create their own levels, waves, and towers. *built with Python + PyQT*
- **Red marble**: A game that features an environment that represents the weather patterns of Mars. Players must survive the elements, and build structures in hopes of colonizing the planet. *built with Python + PyQT*
- **PixPocket**: Web application providing users with an intuitive and easy-to-use engine for transforming their own design into a printable paper wallet template. *built with JavaScript*
- **Spider Streamer**: Automatically sets up an rtsp server, and streams, for every camera plugged in to a robots On Board Computer. Easy plug'n'play use. *built with Python, C, udev, and GStreamer*
- **Homemade 900Mhz Router**: Built a router essentially from scratch, allowing communication with a robot over long distances using 900Mhz. *built from an alix board, and Bash*
- **XNAT.org Windows 8 app**: Created an intuitive frontend for the XNAT.org site using their API. *built with JavaScript*

awards and achievements

- 8th place at the 2013 NASA Lunabotics mining competition. *York University Rover Team Member*
- 1st place at the 2012 University Rover Challenge. *York University Rover Team Member*
- Best Use of Financial API at University of Toronto 2013 Hackathon. Presented by Orbis. *at.me project*
- Most Creative Service App at University of Toronto 2013 Hackathon. Presented by Microsoft. *at.me project*
- Finalist at LinkedIn Toronto Hackday 2013. *PixPocket project*
